
ETHAN LI

HIGH SCHOOL STUDENT

BUILDING AI SYSTEMS FOR REAL-WORLD PROBLEMS

CONTACT

972-809-7208

Ethanli2009@gmail.com

Dallas, TX

PROFILE

Rising senior at Highland Park High School building AI systems for real-world impact.

EDUCATION

HIGHLAND PARK HIGH SCHOOL

12th Grade (Fall 2026)

2023 - 2027

INTERESTS

- Applied AI for Real-World Problems
- Competitive Programming (USACO)
- Designing Intelligent Systems
- Exploring Emerging AI Technologies

SKILLS

- Programming: Python, Java, JavaScript, TypeScript
- AI Systems: LLM-based systems, speech processing, prompt engineering
- Systems & Architecture: Full-stack development, API design, scalable backend systems
- Infrastructure: Docker, cloud deployment, workflow automation (Dify, n8n)

ACHIEVEMENTS

- HPHS SciTech Fair — 1st Place, Jay Ingram Award
- Dallas Regional Science & Engineering Fair (DRSEF) — Honorable Mention (Top 4)
- Scholastic Writing Awards — Regional Silver Key
- Youth Board of Governors Member (Computer Science Chapter), Asian Culture and Education Society USA
- President's Volunteer Service Award — Gold
- Gold Award, International Service Honor Recognition
- Member — AI Club; Coding Interest Group
- Hackathon Participant — Prompt Design & Agentic AI Systems (Summer 2025)

CERTIFICATIONS & LEARNING

- Full-Stack Web Development Certificate — UT Dallas
- CS50: Introduction to Computer Science — Harvard University
- Introduction to Java (Grade A) — Johns Hopkins Center for Talented Youth
- Competitive Programming Practice — LeetCode, Codeforces (C++, Python)

PROJECTS (2024-2025)

SPEAKWISE: AI-POWERED SPEECH THERAPY PLATFORM

HPHS Sci Tech Fair — 1st Place & Jay Ingram Award
DRSEF — Honorable Mention (Top 4)

- Built a multi-stage neural speech repair system achieving 46% fluency improvement and 95%+ stutter reduction
- Designed pipeline: Whisper (ASR) → LLM correction → XTTS synthesis with real-time streaming
- Introduced a correction coefficient (λ) to control fluency vs. speech naturalness trade-off
- Implemented latency-aware architecture and mitigated error propagation across stages
- Targeted real-world pediatric speech use, addressing ASR instability and deployment constraints
-

EELOCUTIONIST — AI INTERVIEW COACHING PLATFORM

Internship Project, Deployed Product

- Built a production-level AI interview system deployed on a live platform, supporting real-time user interactions
- Developed backend using Express.js + LLM evaluation, integrating speech APIs
- Designed multi-format interview engine (behavioral, technical, case-based)
- Implemented performance analytics dashboard with scoring and feedback tracking
- Contributed to a scalable AI system focused on human-AI interaction

---

ZEITGEIST — AI SYSTEM FOR FINANCIAL REASONING

Independent Project | Real-Time AI System

- Built a real-time AI system for financial reasoning under uncertainty, analyzing options data and market signals
- Designed pipeline integrating Polygon.io APIs with LLM-based interpretation of volatility and Greeks
- Developed backend using FastAPI + Docker for scalable, low-latency deployment
- Implemented continuous data ingestion and inference pipeline for dynamic market conditions
- Explored LLM-based reasoning in structured financial domains
